

mesonephric duct development	pulmonary artery morphogenesis	regulation of endothelial tube morphogenesis	glucose import across plasma membrane	regulation of cell communication by electrical coupling	negative regulation of macrophage cytokine production
metanephric nephron tubule morphogenesis		morphogenesis of an epithelial sheet	glucose import across plasma membrane		negative regulation of heart rate
ATP synthesis coupled electron transport	caveola assembly		tricuspid valve development	regulation of lyase activity	regulation of vascular associated smooth muscle cell migration
	bleb assembly	regulation of cytoplasmic mRNA processing body assembly	mitral valve development		
regulation of protein dephosphorylation			disaccharide biosynthetic process		hepaticobiliary system development
