regulation of lyase activity regulation of lyase ac	adenylate	regulation of systemic arterial blood pressure by endothelin		axonal transport of	mitochondrion mitochondrion ion microtubule
regulation of RNA polymerase II regulatory region sequence–specific DNA bindin	of cyclase		regulation of translational of proteinn ubiquitination negative regulation of translational initiation	regulation of positive chemotaxis positive chemotaxis positive regulation of Wnt signaling pathway	regulation of apoptotic cell clearance
cardiac ventricle formation  cardiac ventricle form		histidine <b>histidine cata</b> process	histidine abolic@rocëss process	fatty acid transmembrane transport	response to iron ion
ventricular cardiac muscle tissue development	cardiac right ventricle morphogenesis			cellular glucan metabolic process	TOR signaling
